Login Details & Default Accounts

Credentials for the three default roles.
Treat this document as confidential.

Document version: 1.0

1. Where to sign in

Open the deployed application at:

<https://mu5prototype1.azurewebsites.net/>

You will be redirected to the login page automatically.

Confidential: The passwords below give access to the system. Keep this file somewhere safe.

2. The three default accounts

When the application is first set up, it creates **three default accounts — one for each role**: Owner, Administration, and Trainer. These are the only accounts that exist at the start. Additional accounts can be created at any time by an Owner from the **Accounts** page inside the application.

Role	Email / username	Default password	New password (fill in)
Owner	owner@mu.local	OwnerTemp123!	
Administration	admin@mu.local	AdminTemp123!	
Trainer	trainer@mu.local	TrainerTemp123!	

First thing to do: log in to each of these accounts, change the password to something secure, and either record the new password in the right-hand column above (then re-export this PDF) or store it in your preferred password manager.

Owner password — extra caution: if trainers or administration staff also have access to this document, do **not** save the updated Owner password here. Keep the Owner password somewhere private that only Owners can see.

3. Password rules

Whenever you change a password, the new one must meet every rule below:

- At least **12 characters** long
- At least one **uppercase** letter (A–Z)
- At least one **lowercase** letter (a–z)
- At least one **digit** (0–9)
- At least one **non-alphanumeric** character (e.g. ! @ # \$ %)

Other login rules worth knowing:

- After **5** failed attempts in a row, the account is locked for **15 minutes**.
- Your session stays signed in for up to **8 hours** of activity.
- Email addresses must be unique across all accounts.

4. Creating more accounts

More accounts can be added at any time. Only an Owner can do this:

1. Sign in as the **Owner**.
2. Open the **Accounts** menu.
3. Click **Create**.
4. Enter first name, last name, email, and an initial password.
5. Pick the role: *Owner*, *Administration*, or *Trainer*.
6. Save. The new user will be asked to change their password the first time they log in.

5. If you forget a password

The application does not currently send password-reset emails. If you're locked out:

- Ask an **Owner** to reset the password for you from the *Accounts* page.
- If you are the Owner, ask another Owner to help, or follow the internal reset procedure.

6. Security reminders

- Change every default password above **before** normal use.
- Never share accounts — each person should have their own login.
- Deactivate accounts promptly when staff leave.
- Keep the Owner password separate from Administration/Trainer credentials.
