

USER MANUAL

Movement Unlimited

User Manual — Owners, Administrators & Trainers

A practical guide to signing in, managing accounts, clients, sessions, and reports.

Document version: 1.0

1. Introduction

Welcome to Movement Unlimited — a web-based practice management application for the Movement Unlimited studio. This manual walks you through everything you can do in the application in the order you are most likely to use it. Sections are grouped by task, and each role (Owner, Administration, Trainer) is called out wherever it matters.

1.1 Who this manual is for

- **Owners** — studio owners and managers. Full access to the application, plus the *Accounts* area for creating users, assigning roles, resetting passwords, deactivating accounts, and unlocking locked accounts.
- **Administration** — front-desk and admin staff. Manage clients and sessions, run reports, export data, perform Excel imports.
- **Trainers** — instructors and therapists. Run sessions, record exercises, notes and plans, and view their personal reports.

1.2 How to use this manual

- If you have never signed in before, start at section 3 (Signing In).
- If you are an Owner setting up the studio for the first time, read section 10 (Managing User Accounts) before inviting your staff.
- Use the Troubleshooting table in section 13 first if something isn't working as expected — most issues are answered there.

2. Accessing the Application

Open a browser on your tablet or computer and go to the deployed URL:

<https://mu5prototype1.azurewebsites.net/>

You will automatically be redirected to the login page at [/Account/Login](#). On tablets, we recommend saving the address to your home screen for quick one-tap access.

Supported browsers: Safari (iPad), Chrome (Android / desktop), Edge (desktop). Keep your browser up to date so the pages render correctly.

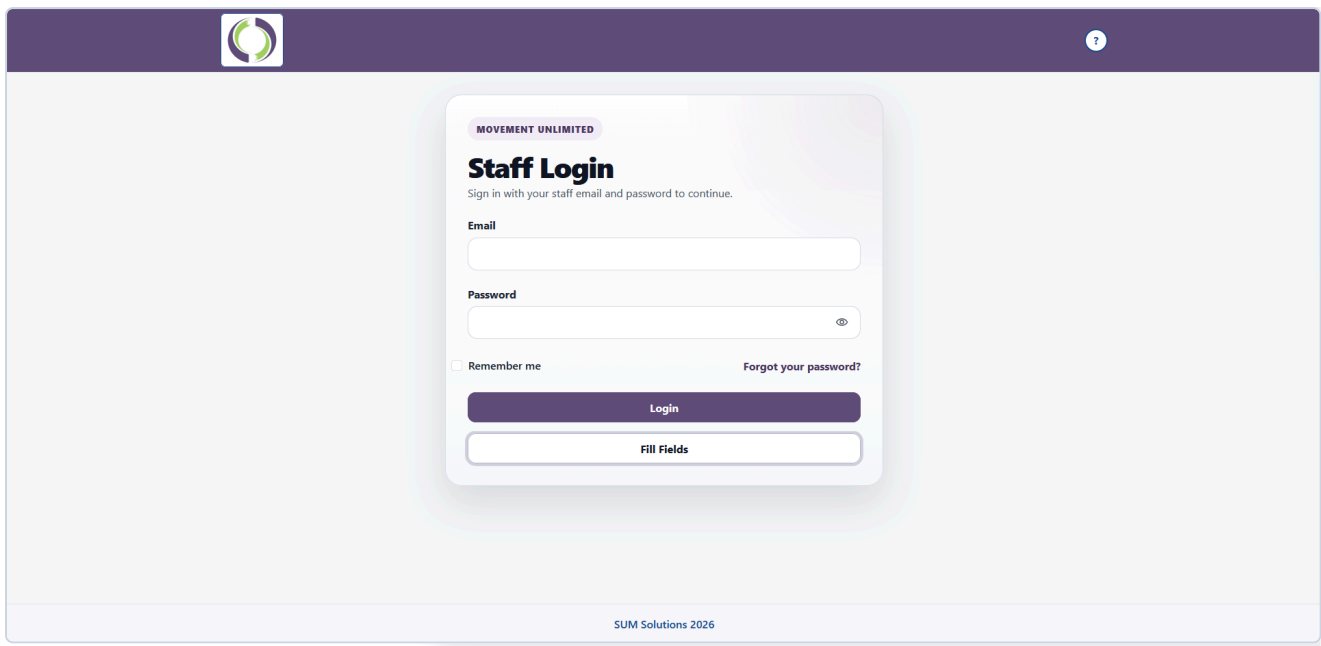

Figure 1. The Staff Login page.

3. Signing In

1. Open the site; you will see the **Login** page.
2. Enter the email address associated with your account.
3. Enter your password.
4. Click or tap **Log In**.

3.1 First-time login

If this is your first login, or an Owner has just reset your password, you will be prompted to **change your password** before you can continue. Pick a new password that meets every rule in section 3.2 below.

3.2 Password rules

- Minimum **12 characters**.
- At least **one uppercase** letter (A–Z).
- At least **one lowercase** letter (a–z).
- At least **one digit** (0–9).
- At least **one non-alphanumeric** character (e.g. `!` `@` `#` `$` `%`).

3.3 Session timeout and account logout

- Your sign-in lasts up to **8 hours** of active use. You'll be logged out automatically after that.
- After **5 failed login attempts** in a row the account is locked for **15 minutes**. Either wait it out or ask an Owner to unlock it.
- Always log out (top-right menu → *Log Out*) if you are leaving a shared tablet.

Forgot your password? There is no "forgot password" email today. An Owner must reset it for you from the *Accounts* page — see section 10.4.

4. Understanding User Roles

Every user has exactly one role. The role decides which parts of the application are available. Owners can change anyone's role at any time.

Role	What they can do
Owner	Everything the other roles can do, plus : create, edit, and deactivate user accounts; assign and change roles; reset passwords; unlock locked accounts; access the <i>Accounts</i> area.
Administration	Manage clients and sessions, record all session data, view and export reports, run Excel imports and exports.
Trainer	Create and edit the sessions they run, manage exercises and actions, record session notes and plans, and view reports for their own work.

5. Tour of the Application

Once you are signed in, the top navigation bar gives you access to every main area. The items you see depend on your role.

Menu item	What it is	Who sees it
Home	Landing page with quick links.	Everyone
Clients	The client directory and profiles.	Everyone
Sessions	All sessions — create, edit, view, delete.	Everyone
Reports	Analytics tabs and exports.	Everyone
Accounts	User accounts, roles, passwords.	Owner only
Your name (top-right)	Change password, log out.	Everyone

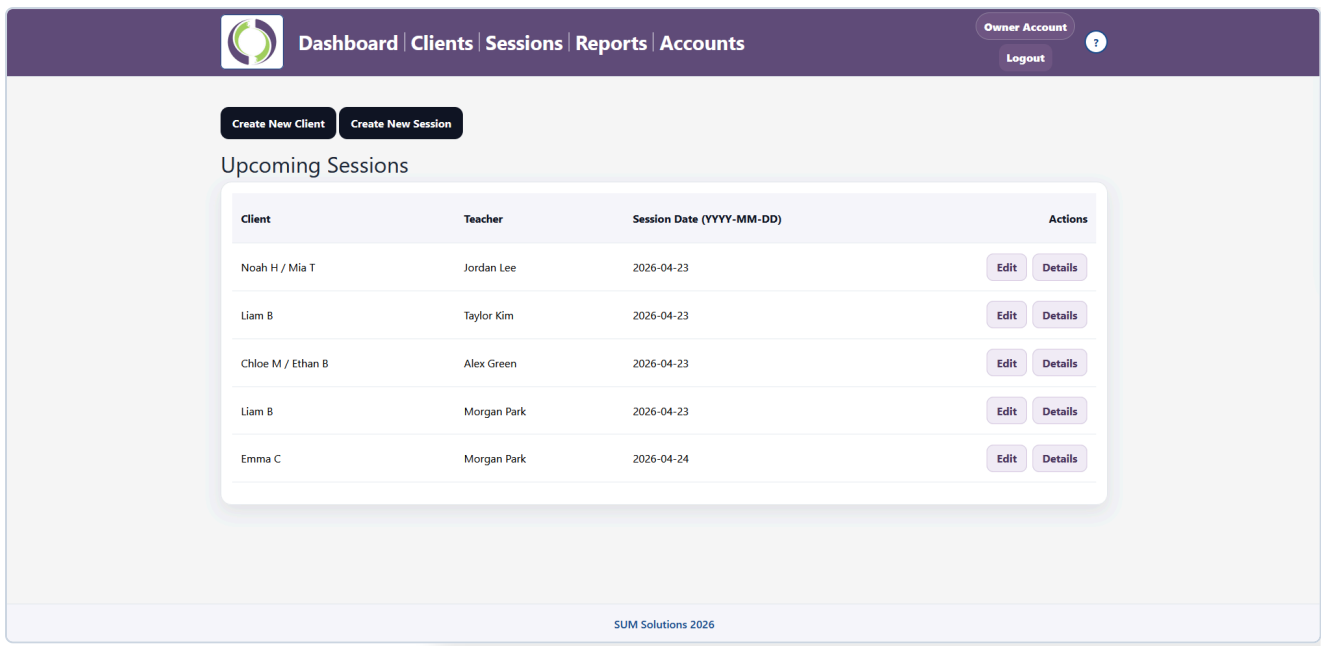

Figure 2. The Dashboard with upcoming sessions and quick-action buttons.

6. Managing Clients

6.1 The client list

Open **Clients** from the top menu. The index shows every client with their name, date of birth, and contact details, plus quick actions: *Details*, *Edit*, *Add Session*

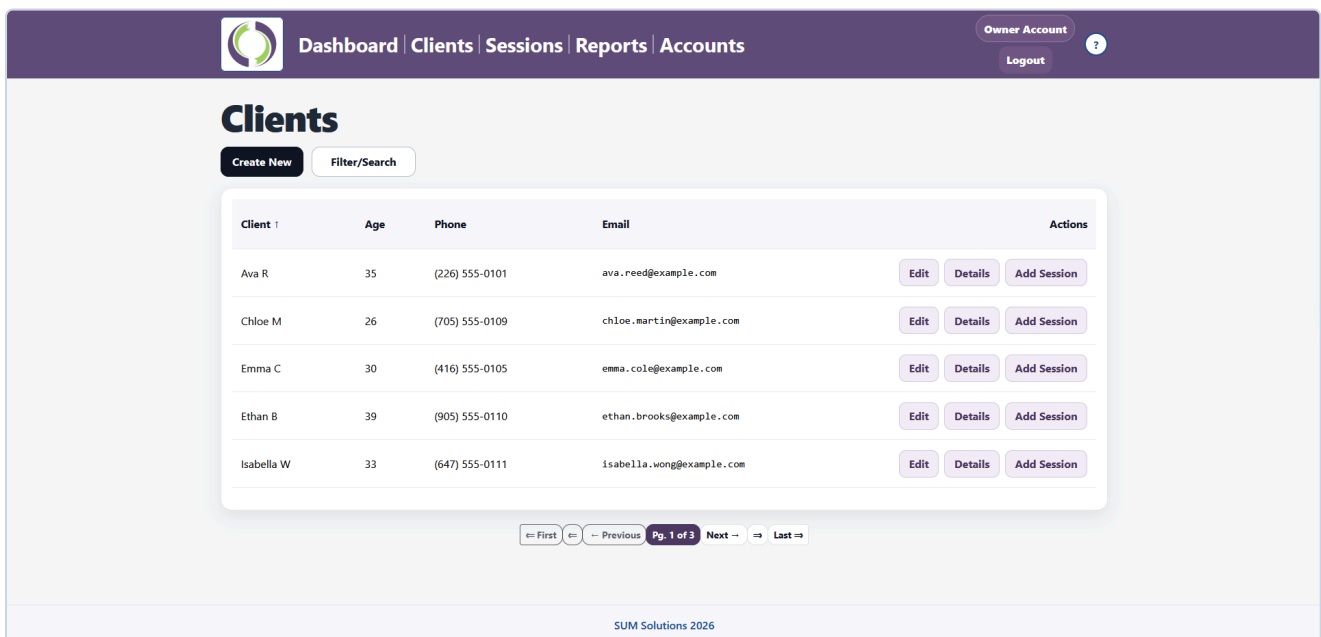

Figure 3. The Clients list showing each client's age, phone, email, and quick actions.

6.2 Adding a new client

1. Click **Create New** at the top of the Client Index.
2. Fill in the required fields:
 - First name, Last name
 - Date of birth
 - Phone number
 - Email address
 - Client folder URL — optional link to an external document folder (OneDrive, Google Drive, etc.)
3. Click **Create** to save.

Tip: use the *Client folder URL* to link out to scanned paperwork, referral letters, or images that don't belong in the application itself.

The screenshot shows the 'Create Client' form within a web application. The navigation bar at the top includes links to 'Dashboard', 'Clients', 'Sessions', 'Reports', and 'Accounts'. The form itself is titled 'Create Client' and is organized into two main sections: 'Client Profile' and 'Contact and File Access'. The 'Client Profile' section contains four input fields: 'First Name *', 'Last Name *', 'Date of Birth' (with a calendar icon), and 'Phone *'. The 'Contact and File Access' section contains two input fields: 'Email *' and 'Client Folder URL'. At the bottom of the form are three buttons: 'Save', 'Fill Fields', and 'Back to Clients'. The footer of the page indicates 'SUM Solutions 2026'.

Figure 4. The Create Client form.

6.3 Viewing and editing a client

- **Details** shows the full profile, plus the list of sessions the client has attended. From here you can open any session directly.
- **Edit** lets you update any of the client's fields. Changes are timestamped and recorded against your username.

Back to Clients

Figure 5. A client's Details page with profile, contact info, and session history.

6.4 Deleting a client

- You can only delete a client who has no sessions. The system will block the delete otherwise, to protect historical records.
- If you need to remove a client with sessions, delete or reassign the sessions first, then delete the client.

7. Managing Sessions

7.1 Creating a session

1. Go to **Sessions** → **Create New**.
2. Pick the **Trainer** running the session.
3. Pick the **Date** and session type (private or semi-private).
4. Add one or more **Clients**. Each client has a *participant order* which is used when printing and exporting.
5. Click **Save** to create the session shell. You can now add exercises and notes.

SUM Solutions 2026

Figure 6. The Create Session form.

7.2 Adding exercises (actions) to a session

1. Open the session's **Details** page.
2. For the chosen client, click **Add Action**.
3. Choose the **Exercise** from the dropdown. The **Apparatus** is inferred from the exercise.
4. Select one or more **Springs** from the tag picker (these are specific to the chosen apparatus — see the Glossary).
5. Add any **Props** using the add/remove tag picker.
6. Set the *Order* (sequence within the session) and any per-action notes.
7. Click **Save**.

Tip: Springs and props use the same add/remove tag interface — click a tag to add it, click the × on an added tag to remove it. The list of springs changes whenever you change the apparatus.

Back to Sessions

Figure 7. The Edit Session page showing Goals, Session Notes, Accessories, Exercises and Next Steps.

7.3 Recording session notes

Each client in a session has five dedicated note areas:

- **Session Notes** — subjective and objective observations during the session.
- **Next Steps** — goals and focus areas for the next session.
- **Physio Info** — physiotherapy assessment and insurance details (session-level, shared across clients in a semi-private).
- **Admin Complete** — administrative close-off for the session.
- **Accessories** — any consumables or accessories used.

7.4 Editing or deleting a session

- Use **Edit** on the session Details page to change the trainer, date, or client list.
- **Edit Action** lets you modify exercises, springs, and props already recorded.
- **Delete** removes the session and everything linked to it (actions, notes, next steps, admin complete, accessories, physio info). This cannot be undone.

7.5 Typical session workflow for trainers

1. Before the session: create the session and add the client(s).
2. During the session: add each action as you go (or straight after).
3. End of the session: fill in Session Notes, Next Steps, and Physio Info.
4. Back at the desk: admin staff mark *Admin Complete* for the day's sessions.

8. Reports and Analytics

The **Reports** area provides several tabbed views on the same page. All views can be filtered by date range (where applicable).

- **Trainer workload** — number of sessions and distinct clients per trainer.
- **Exercise popularity** — most-used exercises over the period.
- **Session statistics** — totals by type, month, client, and apparatus.

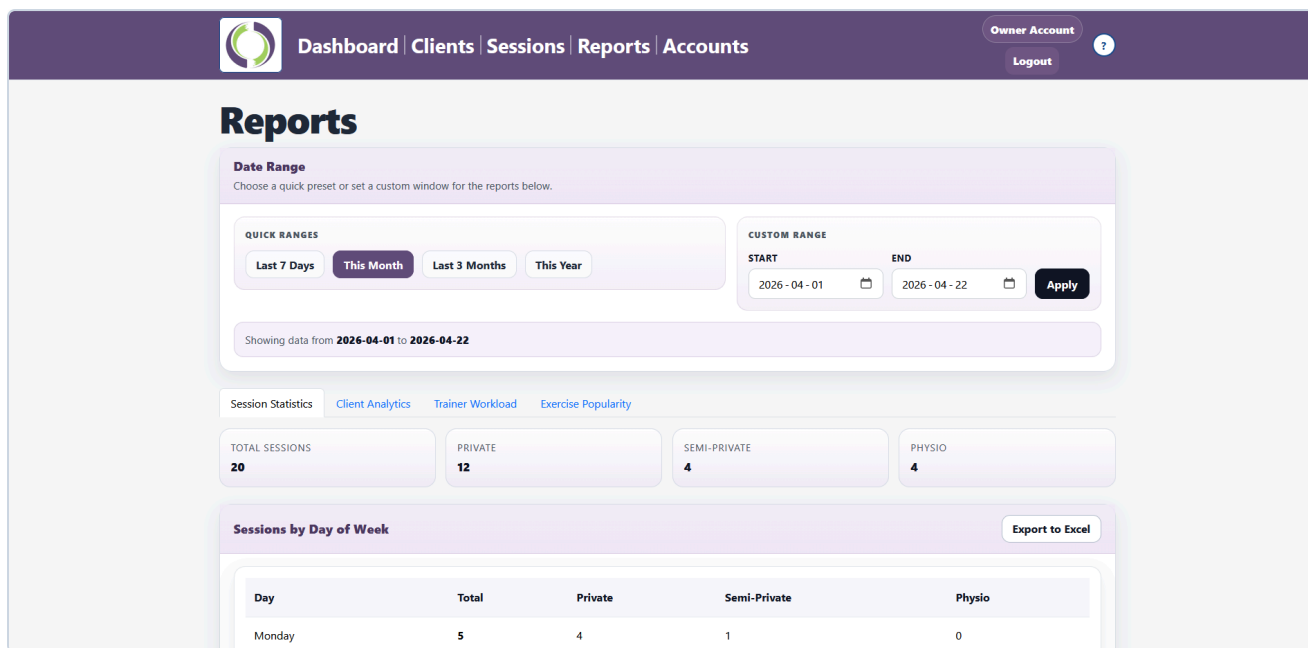

Figure 8. The Reports area with date-range picker and Session Statistics view.

8.1 Exporting reports

- Click **Export to Excel** for a downloadable workbook.
- Click **Export to PDF** for a printable report.
- Exports always reflect the filters currently applied on screen.

8.2 How to read the workload numbers

- Session counts include every session in the selected period, regardless of type.
- Client counts are *distinct*: a client seen five times in a week counts as one.
- Times are stored in the studio's local time.

Taylor Kim	5	5	0	0	2
Morgan Park	3	0	0	3	1

Figure 9. Trainer Workload tab showing sessions and unique clients per trainer.

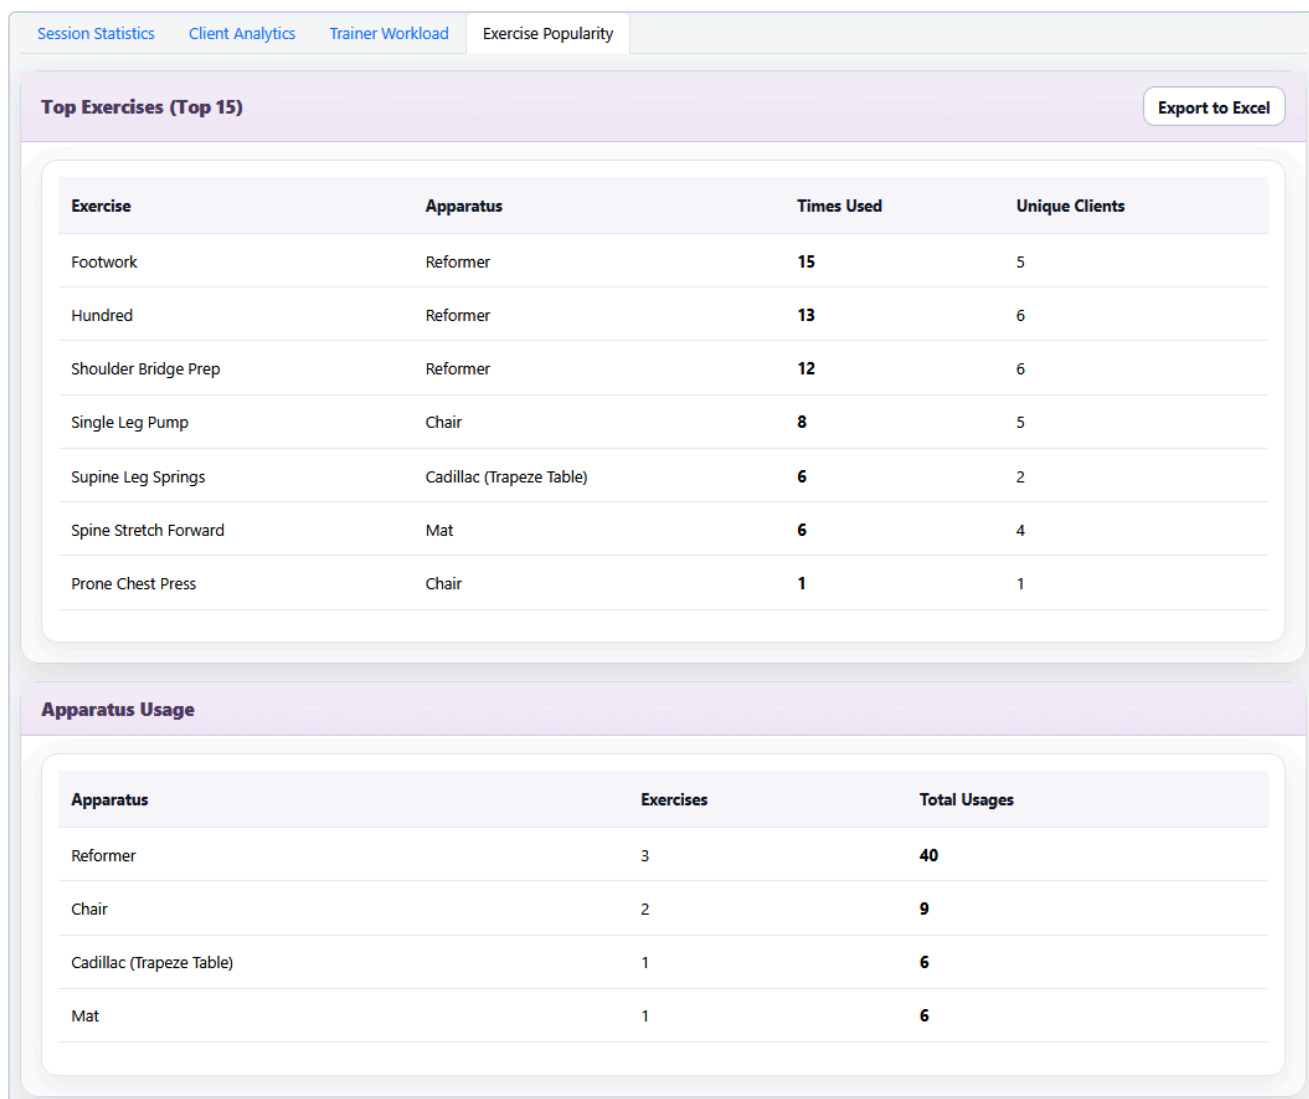

Figure 10. Exercise Popularity tab listing top exercises and apparatus usage.

9. Excel Import & Export of Sessions

Administration users can bulk-import sessions from an Excel file. The import covers over 40 fields per session including trainer, client(s), exercises, springs, props, notes, and physio info. Use the provided template to avoid validation errors.

9.1 Preparing the spreadsheet

- Use the template download from the Sessions page — it has the exact headers the importer expects.
- One row = one action in a session. Multiple rows can share the same session number.
- Names for trainers, clients, exercises, apparatus, and props must match what already exists in the application (spelling counts).

9.2 Running the import

1. Open **Sessions**.
2. Click **Import** and choose your Excel file.
3. Wait for the import summary.
4. Review the rejected-row list (if any) and fix the source file, then re-import only the fixed rows.

Heads up: bulk-imported rows still enforce the same rules as the UI (valid trainer, valid exercise/apparatus combinations). Rows that fail validation are reported in the import summary and are not saved.

9.3 Exporting sessions

- Use **Export to Excel** on the Sessions or Reports pages.
- The file contains exactly the records that match your current filters.

10. Managing User Accounts (Owners)

Owners have access to an **Accounts** menu item that nobody else sees. This is where you manage everyone's login. Read this section carefully the first time you set up the studio, and keep it handy whenever a staff member joins, leaves, or gets locked out.

Dashboard | Clients | Sessions | Reports | Accounts

Owner Account	owner@mu.local	Owner	Active	None	Current	Current account
Trainer Account	trainer@mu.local	Trainer	Active	None	Change required	Deactivate

SUM Solutions 2026

Figure 11. The Staff Accounts list (Owner-only), with role, status, and password controls.

10.1 Your first-day Owner checklist

1. Log in with the default Owner account (see `DefaultAccounts.pdf`).
2. Change the Owner password immediately.

3. Change the default Administration and Trainer passwords too — or deactivate those two accounts and recreate personal ones for the staff who actually use them.
4. Create a personal account for every staff member with the correct role.
5. Tell each staff member their email and initial password. They'll be asked to change it on first login.

10.2 Creating a new account

1. Open **Accounts** from the top menu.
2. Click **Create**.
3. Fill in the fields:
 - First name, Last name
 - Email address (must be unique — this is the user's login)
 - Initial password (meets all the password rules in section 3.2)
 - Role: *Owner, Administration, or Trainer*
4. Click **Create**. The new user will be required to change their password the first time they log in.

Tip: don't use the same initial password for every new user. Make each unique so you can send them the password without it being reused by mistake.

Create Staff Account

Back to Accounts

Set up sign-in access for a staff member, assign their role, and choose a temporary password they will change on first sign-in.

Temporary Password

FIRST SIGN-IN SECURITY

The staff member will use this password once, then they will be prompted to create their own password immediately after signing in. Temporary passwords can be any non-empty value.

Temporary password

Confirm temporary password

Account Status

☒ **Start this account as active**

Active staff can sign in immediately. Turn this off if the account should be created now but stay unavailable until later.

Create Account

Cancel

Figure 12. The Create Staff Account form — sets up the login, role, and first-sign-in temporary password.

10.3 Changing someone's role

1. In **Accounts**, find the user and click **Edit**.
2. Change the **Role** field.
3. Save. The change takes effect immediately — the user may need to sign out and back in to see new menu items.

You can always demote or promote a user later — roles aren't permanent.

10.4 Resetting a forgotten password

1. In **Accounts**, find the user and click **Reset Password** (or *Edit*, depending on the screen).
2. Set a new temporary password.
3. Send it to the user through a secure channel.
4. They will be asked to change it the next time they log in.

10.5 Deactivating and reactivating accounts

- **Deactivate** a user who has left the studio or shouldn't be signing in for a while. Their account and history are preserved, but they can no longer log in.
- **Reactivate** later if they come back — it's the same switch.
- Do not delete accounts just to "clean up" — deactivation keeps the audit trail intact.

10.6 Unlocking a locked account

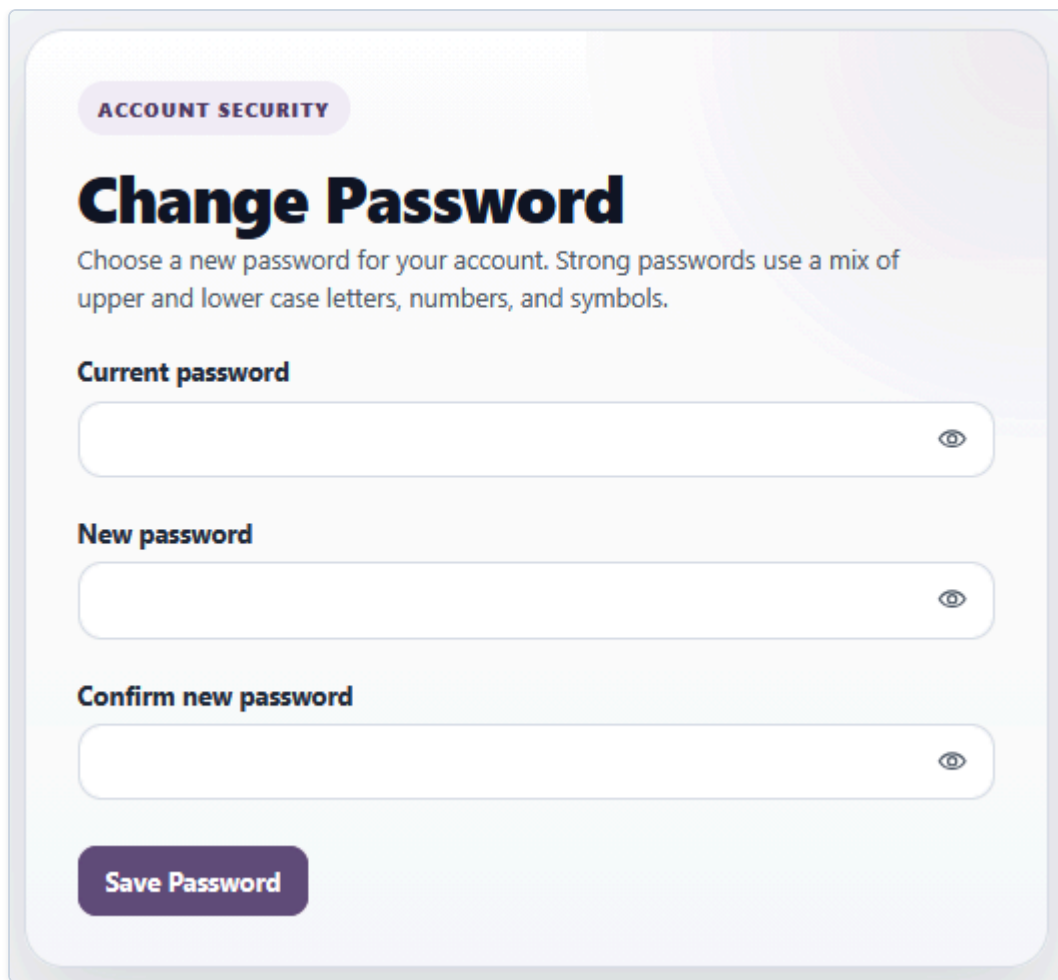

When a user types their password wrong five times in a row, the account is locked for 15 minutes. If they can't wait, an Owner can clear the lockout from the *Accounts* page by opening the user and using the **Unlock** action (or by resetting their password, which also clears the lock).

10.7 Account hygiene — recommended practice

- One account per person. Never share.
- Keep at least two Owner accounts active so no-one is ever fully locked out.
- Deactivate accounts promptly when staff leave.
- Rotate the Owner password every few months and on any suspected leak.
- Only grant the Owner role to people who genuinely need to manage users.

11. Logging Out & Changing Your Password

- Click your name (top-right) → **Log Out** to end the session.
- Click your name → **Change Password** to rotate it at any time.
- Your session expires automatically after 8 hours of inactivity.

The image shows a 'Change Password' form within an 'ACCOUNT SECURITY' section. It features three input fields for 'Current password', 'New password', and 'Confirm new password', each with a toggle icon. A 'Save Password' button is at the bottom. The form is set against a light purple background with a subtle wave pattern.

ACCOUNT SECURITY

Change Password

Choose a new password for your account. Strong passwords use a mix of upper and lower case letters, numbers, and symbols.

Save Password

Figure 13. The Change Password form. New passwords must meet every rule in section 3.2.

12. Glossary

Term	Meaning
Session	One scheduled appointment, private or semi-private.
SessionClient	A specific client's participation in a session. Notes, next steps, and accessories attach here (not to the session directly).
Action	A single exercise performed within a session, including springs and props. Multiple actions make up a session.
Apparatus	The physical piece of equipment used for an exercise (e.g. Reformer, Cadillac, Chair).
Spring	A resistance setting attached to an apparatus. Each apparatus has its own list of available springs.
Prop	A small accessory added to an action (e.g. resistance band, small ball).
Physio Info	Physiotherapy assessment plus insurance details stored against the session.
Admin Complete	Administrative close-off flag per client per session.
Owner / Administration / Trainer	The three user roles (see section 4).

13. Troubleshooting

Symptom	What to do
"Your account is locked" message at login	Wait 15 minutes, or ask an Owner to unlock or reset it (section 10.6).
"Access Denied" page after login	Your role does not permit that page. Ask an Owner to review your role (section 10.3).
Can't delete a client	The client has linked sessions. Delete or reassign those first (section 6.4).
A dropdown is empty (e.g. Springs)	Springs are tied to the selected apparatus — confirm the exercise's apparatus has springs configured.
Excel import rejects rows	Check the import result summary for the validation message and fix those rows in the template.
Session didn't save	Check your WiFi. If the connection drops mid-save, reload the page and re-enter the last field that didn't save.
Password rejected on change	Re-check every password rule in section 3.2 — missing any one of them will reject the password.
Menu items missing after role change	Sign out and back in so the new role takes effect in the navigation.
Owner account compromised	Use a second Owner account to reset the password immediately, then review the Accounts list for anything unfamiliar.

14. Known Issues & Limitations

A few things to be aware of while using Movement Unlimited:

- **No "forgot password" email.** If you get locked out, ask an Owner to reset your password from the *Accounts* page.
- **Account lockout.** Five wrong password attempts in a row locks the account for 15 minutes. Wait and try again, or ask an Owner to unlock it.
- **WiFi required.** An internet connection is needed at all times. If WiFi drops, wait until it reconnects before saving anything.
- **Tablet browser only.** Tested in Safari, Chrome and Edge. Older browsers may display parts of the page incorrectly.
- **Client cannot be deleted while sessions exist.** Delete or reassign the client's sessions first.
- **Excel import validation is strict.** Rows that fail validation are reported in the import summary and are not saved — fix the row in the template and re-import.
- **Bulk operations are limited.** There is no bulk edit or bulk delete for clients or sessions yet; changes are made one record at a time.

- **Audit detail.** Created / updated stamps are stored, but there is no in-app history viewer — ask the development team if you need an audit trail exported.
- **One role per user.** A user can only hold one role at a time. Owners who also want to act as a trainer simply use the Owner account; the Owner role already covers everything Trainer and Administration can do.

15. Frequently Asked Questions

Q. I can't see the Accounts menu item. Why?

Only Owners see the Accounts menu. Ask an Owner to change your role if you need access.

Q. Can two clients share one session?

Yes. Semi-private sessions have two or more clients, each with their own participant order, notes, and next steps.

Q. What happens to a client's sessions if I deactivate a trainer?

The sessions stay in the system unchanged. A deactivated trainer simply can't sign in any more.

Q. I made a mistake on a session. Can I undo it?

There is no undo. Open the session and use Edit or Edit Action to correct the record. If you deleted a session, you will have to recreate it from memory or from your paper notes.

Q. Can I log in from home?

Yes — the application is on the internet, not the studio WiFi. Any device with a browser and connection will work.

Q. Why do I keep getting logged out?

Sessions expire after 8 hours of inactivity. If you're being logged out sooner, check that your browser isn't clearing cookies.

16. Getting Help

If you hit an issue that isn't listed above, contact your studio Owner or raise an issue with the development team. Include:

- What you were trying to do
- The URL in your browser's address bar
- A screenshot of the error (or the text of the error message)
- The date and time the problem happened
- Which account you were signed in as

This is usually enough for the team to reproduce and fix the issue quickly.
